

**ABSTRACT**

---

In a refrigerating apparatus in which gas refrigerant is injected into suction pipes (10a, 10b) of compressors (2A, 2B) from an oil return passageway (21) and from a gas injection passageway, a liquid injection passageway (15) through which liquid refrigerant is injected into the suction side of compressors (2A, 2B) is provided and, in addition, the oil return passageway (21) and the gas injection passageway are connected to the liquid injection passageway (15), thereby making it possible to prevent the occurrence of abnormal noise due to the intermixing of gas refrigerants in the suction pipes (10a, 10b).
